Summary

AI/ML Engineer with hands-on experience in Computer Vision, Deep Learning, Generative AI, and intelligent application development. Experienced in building end-to-end AI solutions using Python, TensorFlow, Flask, OpenCV, and Google Gemini API, with projects spanning computer vision, AI assistants, healthcare, and analytics. Passionate about developing scalable AI systems for real-world automation and engineering applications.

Technical Skills

- **Programming:** Python, SQL
- **Machine Learning & AI:** Supervised Learning, Unsupervised Learning, CNN, LSTM, Transfer Learning, NLP, Feature Engineering, Model Evaluation
- **Generative AI:** Google Gemini API, OpenAI API, Prompt Engineering, Retrieval-Augmented Generation (RAG), LLM Applications
- **Computer Vision:** OpenCV, Image Processing, Image Classification, TensorFlow Lite
- **Libraries & Frameworks:** TensorFlow, Keras, Scikit-learn, Flask, Streamlit, Pandas, NumPy, Matplotlib, Seaborn
- **Data & Visualization:** EDA, Data Cleaning, Feature Engineering, KPI Generation, Power BI, Excel
- **Databases & Deployment:** MySQL, MongoDB, SQLite, Firebase, REST APIs, Docker, Render
- **Tools & Cloud:** Git, GitHub, Google Cloud, VS Code, Jupyter Notebook

Experience

Data Science Intern
Amdox Technologies

April 2026 – Present
Hyderabad, India

- Developed **NeuralRetail**, a retail analytics platform using Python and Power BI to analyse over 1M+ retail records, delivering interactive dashboards for sales, customer behaviour, inventory analysis, and business KPIs.
- Built **MediVerse AI**, an ML-powered healthcare recommendation platform, and currently developing an AI chatbot integrating Google Gemini API for intelligent healthcare assistance and conversational support.

AI/ML Research Intern
IIIT Ranchi

May 2026 – Present
Hybrid

- Developing **AgriVision-XAI**, a research-grade enhancement of a plant disease detection system using deep learning, transfer learning, and computer vision techniques.
- Improving model accuracy, robustness, and real-world applicability through architecture optimization, cross-domain evaluation, and research-driven experimentation.

AI/ML Intern
CodexIntern

April 2025 – October 2025
Hyderabad, India

- Developed AI assistants and conversational chatbots using Google Gemini API with persistent memory, voice interaction, and intelligent task automation.
- Designed modular Flask-based backend services integrating multiple APIs for context-aware conversations and workflow automation.

Machine Learning Engineer (Freelance)
Client Project (Confidential)

May 2024 – December 2024
Hyderabad, India

- Developed an end-to-end CNN-based crop disease classification system using 70K+ labelled images, achieving over 90% validation accuracy.
- Built the complete machine learning pipeline including preprocessing, augmentation, model training, evaluation, and deployment.

Projects

AgriVision-XAI [Repo]	Python, TensorFlow, EfficientNetB0, OpenCV
- Developed a research-grade plant disease detection system using EfficientNetB0 and TensorFlow with attention-based deep learning for accurate crop disease classification. - Built an interactive Streamlit application featuring disease severity estimation, TensorFlow Lite deployment, and explainable prediction visualization.	
MediVerse AI [Repo]	Python, Flask, Scikit-learn, SQLAlchemy
- Developed an ML-powered healthcare system for symptom-based disease prediction, confidence scoring, medicine recommendations, and prediction history. - Built Flask authentication, analytics dashboards, admin access, and PDF/Excel report exports with a modular application architecture.	
Nimbus AI – Intelligent AI Assistant [Repo]	Python, Flask, Gemini API, RAG
- Built an AI assistant with Retrieval-Augmented Generation (RAG), persistent conversational memory, voice interaction, and real-time web services. - Developed a modular Flask backend integrating Google Gemini API, web search, weather, cryptocurrency, and image search for scalable AI workflows.	

Education

Jawaharlal Nehru Technological University Hyderabad	2021 – 2025
B.Tech – Computer Science and Engineering (AI & ML Specialization)	<i>CGPA: 7.44</i>
Kendriya Vidyalaya Gachibowli	2019 – 2021
Higher Secondary (CBSE)	<i>CGPA: 8.2</i>

Certifications & Achievements

- Google Build with AI Bootcamp (2026) Google Cloud Gen AI Exchange Program Vertex AI Gemini Skill Badges
- Infosys Springboard Generative AI Virtual Internship (2025) Computer Vision with Python (Udemy)
- NPTEL Python for Data Science 1st Place – Mind Plug Fiesta National-Level Hackathon
